

EARTH'S CORE

by Celestial Dynamics

Celestial Dynamics

DESCRIPTION

The Earth's Core App lets you see our planet's internal structure. Just point your mobile to the center of the Earth and experience a deep look inside our planet. Right beneath your feet, thousands of kilometres deep, lies a giant ball of molten iron as hot as the surface of the sun!

Explore the Layers of the Earth and their names, discover the temperature and depth of each layer.

Price: Free

Category: Education

Age: any

OS: iOS and Android

Developer: Celestial Dynamics Ltd

Release date: 21st June 2017

contains no in-app purchases or third-party advertising.

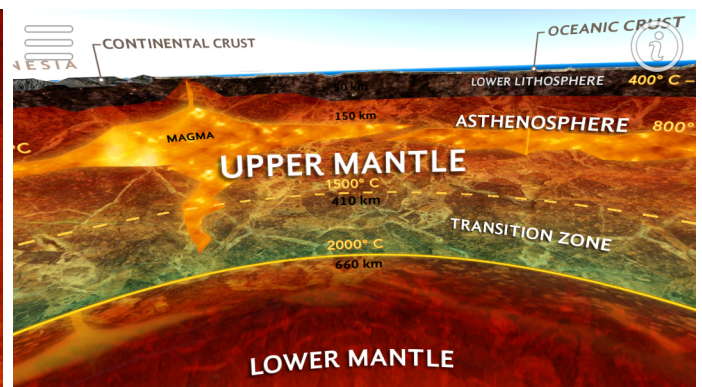

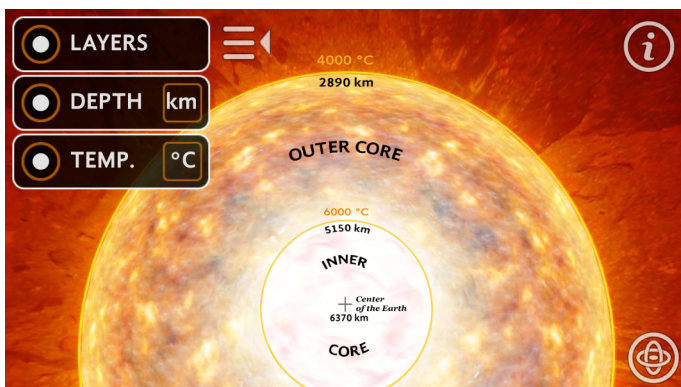

The internal structure of the Earth is fascinating. Rising temperatures while digging deeper were observed and volcanos suggested what may lie deeper under the surface.

Today, earthquake waves are recorded by seismographs all over the world revealing information about the chemical composition, temperature, density and depth of the Earth's layers.

Recent speculations suggest that the inner core could be rich in gold. Some scientists interpret it as being a plasma that behaves as a solid, while others speak of giant crystals of iron. Even a core in the inner core has been proposed.

The Earth's core still holds many mysteries.
